## Per Aarsleff secures future IT operations

**One of Denmark's largest engineering firms, Per Aarsleff, has chosen a combined solution from CapaSystems and Microsoft. The aim is to stabilise the IT operations and close any security holes in the organization. At the same time, they wanted to reduce time spent on routine tasks and provide users with better service.**

Per Aarsleff has chosen to streamline and secure their future system management IT operations. The software are provided by CapaSystems and Microsoft. The aim is to

create a solid foundation for the company's long-term development.

### Superior technology at a low price

"It was easy to make the decision to use CapaSystems as a supplier. We were already a customer of Microsoft and therefore had a tool for distributing software over the network. But we lacked a system that could build the packages," says IT manager Sven Sandby. There were of course alternatives, but CapaInstaller Package Creator won on the technology, cost/benefit and the personal aspect. "It has meant a lot that the cooperation on the project has been so good. We have been pleased to work with CapaSystems, and it has been an advantage that they are a local company," says Per Aarsleff.

### Time saved on support

"We have spent a lot of time cleaning up machines infected by spyware and other annoying programs that users inadvertently download. With the new design, we can easily format PCs and still maintain the individual user's vital data. And it will only take a few minutes," explains Sven Sandby.

The restructuring has led to a tighter control of the applications that are used in the organization. This is designed to ensure uniform operation across the organization and thus save time.

### Source of errors are reduced

The new structure also means a streamlining of the number of applications on the approx. 600 computers in the company. Previously, there have been a host of programs, for example CD-burning or video players.

The number is now reduced to one program for each task. Hereby the IT department no longer has to support many different applications.

"Our starting point was that we could cover our needs with approx. 20 different packages. But as we got started, we found out that it was easy and quick, and therefore we have expanded to 60 packages", says IT manager Sven Sandby.

### Package solutions with flexibility

Per Aarsleff has built approximately 60 installation packages with Package Creator and this number is enough to cover all the company's IT needs.

If a user needs to install special software, it is no longer an obstacle. Some are using special software for complex calculations, and in these cases the IT department makes a manual installation. The savings for Per Aarsleff as a result of the new solution has not yet been calculated, but the potential is assessed to being very high.

### Basis for Growth

"Using two work days on debugging a single PC is history. Now we have a structured platform with a high degree of security from which we can develop further." Per Aarsleff expects the IT-operations will increase by five per cent annually, equivalent to up to 150 new computers in the company the following year. This increase is expected to be handled by the current number of employees - using the new IT-design.

### About CapaSystems A/S

CapaSystems A/S is a Danish company that develops software solutions that helps to ensure optimal performance on all computers while reducing the cost and effort required for administration, maintenance and support of Windows®-based clients.

**CapaInstaller Package Creator has been tested and approved by Microsoft.**
