Optimize your IT and business operations

Creating a stable IT environment, achieve optimal performance and improve administration and maintenance is some of the major challenges in all organisations, CapaInstaller Management Solution can help achieving all that and more.

Ease of use

An easy manageable interface which combines all modules of the CapaInstaller Management Solution in one console with a logic and recognizable layout ensures a fast overview, and enables instant use.

Centralised change control

The time spent on troubleshooting can often be long and of great disturbance for the customer. CapaInstaller Management Solution automatically creates documentation on all changes made on all units which makes it easy to track past changes and thereby improves the trouble shooting process.

Minimizing the impact from daily operations on the business performance is the essence of managing changes. CapaInstaller Management Solution offers all opportunities of having build and test in a safe environment before deploying to the production environment. This results in minimum interference and creates a better end-user experience.

"With CapaInstaller Management Solution we save time and resources when reinstalling pc's. In the past it took us a whole day to do manually - now it is done in an hour."

- Carsten Jakobsen, BoConcept

Optimised daily operations

Maintenance of clients is necessary but can be a time consuming process, CapaInstaller Management Solution makes it possible to handle all operations from one

console, the troubles of having far distance clients and long transportation times are hereby eliminated. Furthermore the easy accessible console simplifies the daily handling of the Life Cycle Management of units.

Improved end-user experience

Not only is the IT department affected by the advantages of optimised daily operations, also end-users will experience a remarkable difference. CapaInstaller Management Solution offers the possibilities of being more flexible in all operations, be it maintenance of PC's, updating patches, reinstalling etc. If needed it is even possible to differentiate the level of service according to the requirements of the business, which eliminates the end-user disturbance.

Bring decision making to a higher level

Based on the data gained from change documentation, reports can be created and are easy accessible for whomever, whenever needed, either in the CapaInstaller Management Solution console or from a web client. These reports can assist in measuring issues, which has not been possible before, such as metering, licence harvesting and life cycle management of software as well as hardware. The results can assist decision making on a higher management level.
