

Performance Guard

See IT the way your users do!

Systems Management from the end-user perspective

Improve company competitiveness

The performance of IT systems is of vital importance for all types of businesses. Company competitiveness is highly dependent on the IT systems operating smoothly at all times. Performance Guard helps you securing the IT systems performance.

Real time data

Performance Guard leverages the experience of each end-user's interaction with IT to improve performance, capacity planning and resolve performance issues before they become critical to end-users.

Identify IT systems bottlenecks

IT systems with bottlenecks threatens earnings. Performance Guard identify the bottlenecks; thus giving you the knowledge to make the right troubleshooting.

The performance of IT systems is of vital importance for all types of businesses. It is a known fact that competitiveness is highly dependent on the IT systems operating smoothly at all times. Performance Guard is the solution.

Complete Systems Overview

Performance Guard leverages the experience of each end-user's interaction with IT to improve performance, capacity planning and resolve performance issues before they become critical to end-users.

Unlike traditional data center management solutions configured specifically to manage one device or task, Performance Guard measures all data directly on each end-user PC or device to collect end-to-end real time IT performance data.

Leading research companies states:

"This new approach addresses nearly 75% of all IT performance issues that are not detected by traditional data center management systems at the time they are reported by end users."

The collected performance data is consolidated into a single database. It is structured properly for reports that turn the data into valuable information about the performance of each critical system and if there are issues, identifies the location within the infrastructure that failed.

This cross application and infrastructure reporting is not possible with traditional systems management solutions.

Achieving an end-to-end overview in a matter of days is unique to Performance Guard and delivers true Systems Management from the end-user perspective. It is easy to spot the systems that are having response time or availability issues. Thus, identifying bottlenecks in the IT infrastructure. Bottlenecks that are a threat to the overall growth potential and performance of the company.

Business Value is significant

The ability to see how your critical applications run from your users' point of view enables much faster insight into every component of the most complex infrastructures. It delivers the informational foundation for operational and strategic planning and problem solving including:

IT Issue Resolution based on the users real experience

- Overview based performance tuning of applications or infrastructure components
- A management report showing how each of your critical applications performed on a weekly basis which will give the necessary information to stop the arguing about what actually happened
- Real-time data for capacity planning and service level agreement management
- IT Issue Resolution based on the users real experience

Performance Guard

See IT the way your users do!

- End-to-end high level performance information real time data for capacity planning and service level agreement management
- Proactive performance alerting to IT staff when set thresholds of critical resources are reached

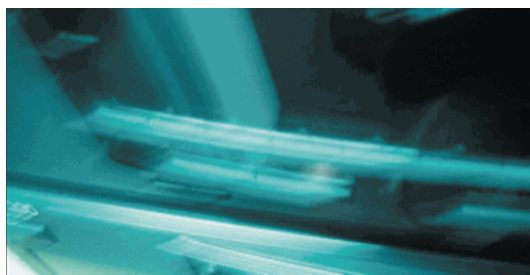

All are initiatives that have a direct impact on the company turnover.

Once installed, the agent automatically sends performance data back to the server. The server consists of collector, database and reporting engines. Extension modules are available for CIO dashboards, Web and client/server application monitoring, Citrix and Web mid-tier servers, network performance monitoring and alerting to data center management solutions.

Setting the Standard

Systems Management from the end-user perspective is quickly becoming a standard enterprise management component residing side-by-side with data center management solutions. Performance Guard is recognized internationally as part of a new generation of end-user based IT management solutions.

IT is the only enterprise class solution capable of augmenting data center management solutions with this new 3rd generation end-user perspective, delivering an un-

precedented view spanning from CIO dashboards to individual device performance information.

The platform consists of an easy to install, self-managed and self-configured monitor that resides on each end-user PC or device, or mid-tier servers that require end-user based monitoring.

About CapaSystems

CapaSystems A/S is dedicated to increase client efficiency, productivity and profitability by providing expertise and cutting edge standard software to leverage the potential of IT system performance.

This dedication has led to a Microsoft Gold Certified partnership since 2004.
